

iScan WMS is a central system to capture and manage warehouse data with barcode scanners. iScan is easy to handle and guarantees high transparency of good movements and batches. Furthermore, iScan allows the direct junction with a superior ERP-system.

iScan WMS supports the warehouse logistics from the arrival of goods all the way to the shipping. Good movements are systematically tracked and documented. A batch-based management of inventory (First In First Out / FIFO) guarantees high transparency of warehouse processes.

iScan WMS allows the direct junction with a superior ERP-system. Thereby, master data can be imported from the ERP-system and changes, e. g. good movements, can be confirmed back to the connected system in real-time.

Functions:

- ▶ Import master data from the ERP-system
- ▶ Automatic acquisition of goods receipt data from the ERP-system
- ▶ Automatic documentation of good movements
- ▶ Overview of the current goods in stock
- ▶ Automatic feedback of relevant data to the ERP-system
- ▶ Filtering, grouping, show/hide columns (information) – e. g. grouping of warehouse locations, materials, batches
- ▶ Save created layouts for recurring evaluations
- ▶ Tools for ongoing and annual stocktaking
- ▶ Stocktaking history
- ▶ Comparison of stocktaking with the ERP-system

Benefits:

- ▶ Transparent system from the arrival of goods to the shipment
- ▶ Gapless tracking of good movements
- ▶ Inventory is always up-to-date
- ▶ Minimize material picking time in the warehouse
- ▶ Increase quality, e. g. by using the First In First Out (FIFO) principle
- ▶ Increase quantity: avoid material bottlenecks and expirations
- ▶ Minimize costs by optimizing the inventory
- ▶ Optimize material disposition
- ▶ Successful implementation: clear, intuitive, understandable

iScan keeps your warehouse data always **up-to-date** and guarantees **transparent** warehouse processes.

Technologies:

- ▶ Connection to a superior ERP-system
 - ▶ RFC, BAPI, XML, BizTalk...
 - ▶ Data import from SAP (master data, goods receipt)
 - ▶ Data access to SAP
 - ▶ Feedback of material flows to SAP (good movements)
- ▶ WLAN connection for mobile barcode scanner
- ▶ LAN connection for stationary scanners and weigh stations
- ▶ Automated reporting via emails (PDF, Excel format)
- ▶ Client application for users: no installation required
- ▶ Central, corporate solution
